DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 9/2/2008 has been entered.
2. Claims 1-7, 9-23 are currently pending in this application. Claims 1, 4, 9-10 have been amended. Claims 15-23 have been newly added.
3. In view of the prior Office action, the 102 rejection as being anticipated by Detering et al. (2004/0016060) has been withdrawn due to the Amendments made thereto. However, the 102 rejection by Bruchmann is maintained below. New 112 rejections are also as set forth below.

Claim Rejections - 35 USC § 112

4. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.
5. Claims 1-7, 9-23 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. Amended claims 1, 9, 10 contain the limitation, "wherein the substrate excludes

Art Unit: 1794

substrates derived from cellulose”, that has no proper support anywhere in the specification as originally disclosed.

6. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

7. Claims 1-7, 9-23 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

8. Claims 1, 9, 10 are indefinite due to the use of “wherein the substrate excludes substrates derived from cellulose”, which is not a positive recitation. Applicants are required to define the substrate to include what it is made of.

Claim Rejections - 35 USC § 102

9. The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

10. Claims 1-7, 9-14 are rejected under 35 U.S.C. 102(e) as being anticipated by Bruchmann et al. (2004/0024087). The reference is cited in the IDS filed 3/4/2008.

The applied reference has a common Assignee with the instant application. Based upon the earlier effective U.S. filing date of the reference, it constitutes prior art under 35 U.S.C. 102(e). This rejection under 35 U.S.C. 102(e) might be overcome either by a showing under 37 CFR 1.132 that any invention disclosed but not claimed in the reference was derived from the inventor of this application and is thus not the invention “by another,” or by an appropriate showing under 37 CFR 1.131.

Art Unit: 1794

Bruchmann discloses a coating on a substrate, the coating comprises a hyperbranched polymer as recited in the presently claimed invention. See text.

Note that Bruchmann discloses the print media including films of polymers and metal foils beside paper, thus reading on the newly added limitation on the substrate. With respect to the surface being modified by the polymer such that it becomes either more hydrophobic or more hydrophilic, it is noted that since the reference teaches the same hyperbranched polymer with the same substrate, the properties of the substrate surface would inherently be the same.

Response to Arguments

11. Applicant's arguments filed 9/2/2008 have been fully considered but they are not persuasive.

In response to Applicants' arguments that Bruchmann does not teach the substrate to be other than those derived from cellulose, it is noted that Bruchmann discloses the print media including films of polymers and metal foils beside paper, thus reading on the newly added limitation on the substrate.
